

# STUDENT LEARNING OUTCOMES

## Data Fluency, Undergraduate Certificate

*Data fluency is a certificate program that guides students through an exploration of data including data integration, ethical considerations, identification of a problem of interest, interpretation of results, and written and oral presentations of findings. This online program guides students through the applications of the fundamentals of statistics necessary for data description and analysis to enable data-driven decision-making in the context of the student's discipline.*

### Student Learning Outcomes

- Identity, formulate, and solve complex data problems by selecting and applying appropriate methods relevant to the student's chosen track.
